

Accident and Incident Management

Report, track and investigate accidents and incidents within the workplace. Improve health and safety standards and conform to HSE regulations.

jComply Accident and Incident Management module is designed to help an organisation in reporting, tracking and investigating the accidents and incidents that occur within the workplace. The module consists of an accident form, violent incident form, near miss form and a Health and Safety checklist. The workflow within jComply allow the forms to be disseminated to relevant individuals and Health and Safety department with email notifications and a full audit trail of each action. This module can help your organisation with the due diligence of reporting the correct information and showing compliance to HSE standards.

All the information submitted through these forms is maintained in the database which can be retrieved through various management reports. The tracking and investigation of the accident and incident report forms results in action items being raised in the system. Each action item is allocated to an individual with a due date and is tracked to completion with email alerts and escalations.

Features

- Reporting of accidents, incidents and near miss events
- Restrict user access to forms
- Attach supportive documents such as images of accident, documents and hand written statements, etc
- Raise non-conformances and action tasks
- Fully integrated RIDDOR reporting
- Email notifications for new tasks and overdue items
- Complete audit trail of all actions and events
- Management reports
- Web based application which is accessed through web browser with no requirement for any installation on client PCs
- All forms can be customised to fit your business
- Fully integrated with jComply

Benefits

- Show compliance to HSE standards and prove that due diligence is carried out in the reporting of accidents and incidents
- Improve business processes and achieve efficiencies through registering and tracking non-conformances, suggestions and improvements
- No need to maintain a paper trail of forms as consistent data is provided across the organisation
- Reduce claims
- Reduce risk and cost to business by improving processes and procedures through trend analysis of accident and incident data

About jComply

jComply is a complete policies and procedures management system with a 360 process to introduce and implement policy documents within a company. The system ensures that the concerned personnel reads the policy documents, tests the employees' knowledge about the related policy and generates comprehensive reports on the company's compliance level. jComply is built on JEE technologies and thus is one of the only web-based applications of its kind. jComply has additional modules to support the process of compliance such as risk assessment module, audit module, forms module and a mobile module for supporting field workers.

jComply is an open compliance framework and is used by clients for supporting Health and Safety, FSA regulations, Information Security, Environmental Issues, Quality standards and Investors in People.

Available as SaaS

jComply AIMM can either be deployed directly on the client server or accessed as software as a service. As a SaaS option, jComply AIMM is hosted and managed by Tabaq Software which can be accessed by the users through Microsoft Internet Explorer anywhere on the internet. SaaS does not require any software or hardware investment and costs on a per user per month basis.
